PROFESSIONAL SUMMARY

Software Engineer with **3+ years** of professional experience contributing to end-to-end software development in production environments, spanning fintech trading platforms, mobile apps, and developer-facing charting tools.

EXPERIENCE

Full Stack Developer — Infitout Financial Technologies

Mar 2024 – Present

Full Stack Developer (Full-time)

Jun 2024 – Present

- Built a cross-platform **Flutter** mobile trading application spanning **10+ screens**, featuring F&O trading with multiple capabilities including option chain, payoff analysis, scanners, daily reports, and advanced order management UX.
- Built **80+ REST APIs** for strategy CRUD, subscribe/unsubscribe, marketplace payments (**Razorpay**), partner payouts, and admin SSO — enabling traders to run **AliceBlue** algos end to end.
- Shipped a **minute-level signal engine** across **11 timeframes** that publishes entry/exit signals to **Redis**, decoupling compute from broker execution.
- Built **Redis order workers** with a **WebSocket LTP cache** across 2,000-instrument batches (200 ms TTL), including kill-switch, brokerage, and P&L tracking — keeping live orders fast and fully auditable.
- Designed a trading portfolio analysis platform with **AI-powered analysis** for tracking positions and performance metrics.
- Developed 5+ marketing landing pages and automated report generation workflows, cutting manual turnaround time by **~98%**.
- Built a proprietary **charting library** for brokers — **2x faster** and **~50% smaller** than leading tools — extended with an **MCP-based indicator/strategy generator**, **AI chatbot** for chart analysis, custom scripting engine, and built-in strategy backtesting.

Full Stack Developer Intern

Mar 2024 – May 2024

- Rebranded and rebuilt the **F&O (Futures & Options) trading website**, reducing API calls by 3× — directly lowering infrastructure and API costs — while improving code quality and maintainability.

React Native Android Developer Intern — DFPL

Dec 2023 – Feb 2024

- Architected a full-featured **React Native** mobile app with **10+ screens** covering menu management, order placement, real-time tracking, maps, and payment gateway.
- Deployed a responsive **Next.js** website with SEO-optimized performance, plus income analytics dashboards for sales and revenue visibility.

Mobile Application Developer Intern — Cwipedia

Jun 2023 – Sep 2023

- Built a cross-platform edtech app using **React Native** and **Firebase** for browsing, purchasing, and streaming **100+ video courses** with seamless playback and live class support featuring real-time chat, handling **thousands of concurrent users**.
- Integrated secure auth, course catalog with search and filtering, and auto-graded in-app assessments, contributing to measurable improvements in learner engagement.

PROJECTS

Trading Terminal

- Developed a modular, **widget-driven** trading terminal with charts, option chain, orders, analytics, payoff graph, and strategy builder.
- Enabled users to add, remove, and freely resize **multiple widgets** on one screen, with broker sign-in, keeping the layout smooth even with several live widgets open.

Code Execution Platform

- Built a full-stack platform using **Next.js** and **FastAPI** where users submit code that runs in isolated **Docker** containers with per-language sandboxing for Python, JavaScript, and C++.
- Implemented a **Redis** job queue for async execution, **PostgreSQL** for submission history, and real-time results over **WebSockets** — with rate limiting and execution timeouts supporting concurrent users.

SKILLS

Languages & Frameworks: JavaScript, Python, React.js, Next.js, React Native, Flutter, FastAPI, Django

Styling: HTML, CSS, Tailwind CSS

Tools & Technologies: WebSockets, Git, Firebase, MongoDB, REST APIs

EDUCATION

Bachelor of Engineering in Computer Science

KLE Dr. MS Sheshgiri College of Engineering, Belgaum, India • Dec 2020 – Jun 2024

ACHIEVEMENT

Secured KSCST funding under the SSP for the 2D-to-3D Drawing & Defect Analyzer, built as the final year project.
